NIRA DYNAMICS

Linköping, Sweden
23 June, 2014

To whom it may concern,

Vaclav Skarka has during his time at NIRA Dynamics become the responsible of the graphical software tools used for data collection at NIRA Dynamics and our external partners. The work has mostly consisted of C# .NET development but also of function design, collecting error reports and quality assurance.

Mr. Skarka did also take part in one of our customer projects where he acted as an integration engineer. The tasks consisted of integrating our software product TPI into the host system. This involved C-programming, failure analysis and system testing.

NIRA Dynamics is a company that is working in the forefront of the automotive industry focusing on safety related software based on sensor fusion. We are a young, growing company with driven employees and slim organization. We provide the global vehicle industry with value adding software and are currently providing the world leading iTPMS system *TPI* worldwide with over 9 million sold licenses.

Mr. Skarka started with us as an intern and due to his very good results he was offered a six month contract which is now expiring. Mr. Skarka would be more than welcome to continue to work with us but is leaving us now on his own request.

Mr. Skarka is a much appreciated colleague, both for his knowledge and for his social skills, and is always happy and spreads a positive atmosphere. He has proven to be a fast learner and has a high working capacity and efficiency. Mr. Skarka has shown great commitment to his work and that he is capable of working both independently and in teams. High quality and good user experience has been important to Mr. Skarka which has made him suitable for taking the responsibility of our graphical software tools. Mr. Skarka has always exceeded our expectations in whatever task he's been given and therefore receives my very best recommendations and I would not hesitate to employ him again if I get the possibility.

Kind regards,

[redacted]

Tobias Carlstedt
Manager Integration, NIRA Dynamics AB
